

GKB Quick-Brush

With the Quick-Brush you have a modular brush which you can adjust to each specific task. You can choose between a rake, brush, double brush, rubber finishing rag, and you can adjust the height. We can equip the Quick-Brush you have chosen with a three-point linkage (tractor) or a wheel set for towing by another type of vehicle.

The GKB Quick Brush can be equipped with many extras. You can choose between a rake, brush, double brush, rubber finishing rag, and you can manually adjust the height. The Quick-Brush will also accommodate you with the construction of synthetic turf pitches. With the 'flip-over tool' on the Quick-Brush infill material can be easily added to new fields and it will always orientate itself in the operating direction.

Regularly brushing the fields prevents impaired drainage, deteriorated technical characteristics due to the compaction and the image of a polluted field. The brushed fields will have the same appearance as on the day of commissioning. Quick-Brush enables you to carry out the correct synthetic turf maintenance, no matter what the requirements.
