

GKB Top-Clean

The Top-Clean is a full mechanic, self driven machine that removes all kind of dirt from the top of the pitch. It can remove things like papers, cigarettes, leaves and even plastic bottles. The Top-Clean can easily be connected to almost every tractor by using a standard three-point hitch or electric drawbar. Using a high driving speed around 10 km/h will result in a perfect looking artificial pitch that you can be proud of !

The Top-Clean is designed as a full self driven machine. Two rubber wheels at the front ensure that the machine will roll softly across the artificial pitch.

A rotary brush is connected with the wheels by a chain drive. The driving speed determines the speed of the brushes.

During operation debris and infill will come on a vibrating sieve. This sieve will separate infill material from the debris. Because of the vibration of the sieve, all pollution moves to the bins at the end. After use, the bins can easily be removed to get emptied in a regular waste container. This machine contains two separate bins
