# Why Spider? spider

**Spider slope mowers are renowned for their productivity, safety and quality of cut on even the steepest of slopes, up to 55°!**

## **Some of the many benefits of Spider mowers include:**

- Highly productive, the largest Spider mowers can replace up to 15 workers with brush cutters, freeing up staff for other tasks and completing jobs faster.
- Controlled remotely, Spider can be operated from up to 100m, keeping users away from danger, noise, fumes and vibration.
- Able to climb up to 40 degrees independently, Spider also has the ability to climb up to 55 degrees with the integrated hydraulic winch.
- The patented steering system and constant 4-wheel drive provides fantastic manoeuvrability and the ability to 'zero turn' on it's axis
- Mulching mower decks can cut through fine turf and heavy grass and brush, returning nutrients into the ground for healthy soil and grass.
- The wheel drive and low weight make Spider mowers gentle on grass and with less erosion, as well as low fuel consumption and fewer emissions.
- And so much more!

As the sole, independent UK distributor of Spider mowers, we are dedicated to bringing you industry-leading professional mowers with support from our highly experienced Area Sales Managers and knowledgeable parts teams.

## **We also provide:**

- Comprehensive product training
- Support for customer field demonstrations
- UK-based After sales, parts and warranty support
- Dedicated dealer portal for easy product registrations and warranty claims
