

# MULTI-PURPOSE COMBI-TOOL NOW AVAILABLE

## FROM GKB MACHINES

Combining versatility and value-for-money, GKB Machines have launched their new Combi-Tool. With a GKB engineered 3-point linkage frame and an ability to equip a range of maintenance attachments, the Combi-Tool gives turf managers the option of conducting multiple operations such as slitting, raking, rolling and brushing in one quick and simple pass.

On show for the first time at SALTEX 2022, the Combi-Tool features four attachment slots which can be tailored to the venue or the task to be conducted on a given day. Brush heads, rake tines, slitting tines, slitting discs and a range of rollers are available – with the option of equipping the Combi-Tool with multiple rows of the same attachment for a more intensive operation if required. Because of its multi-purpose functionality, the Combi-Tool is ideal for multi-sport venues such as winter sport facilities, schools, local authorities and contractors.

The Combi-Tool comes in 1.6m and 2.0m working widths and, as with all GKB Machines, is precision engineered for strength and durability. Swapping between attachments is fast, with the ability to independently adjust each implement once fitted to suit desired working depths.

Commenting on its introduction, UK Operations Manager Tom Shinkins said, "This is a brilliant addition to the GKB portfolio and has been introduced in direct response to demand from our dealer network. Its versatility is its biggest selling point so we're expecting to see a lot of interest from those managing pitches at grassroots level who don't always have the budgets or resources available to invest in multiple machines to conduct some of the basic maintenance operations that can have a massive impact on the presentation, playability and health of their surface."
